

Final Recommendations

1. Keep Instant Bookings Available:

Customer reviews are up by **19.6%** when instant bookings are available, which shows that instant bookings lead to more customer engagement.

Number of bookings were up by **4%** when instant bookings were available.

2. Increase Rates for Instant Bookings:

The business was generating more profits when instant bookings were not available as the average prices were **1.6%** higher in case of “No Instant Booking”.

Hence, the solution is to increase the prices in case of instant bookings as it will funnel the customer base into two sections; one section will opt to pre-book the property, the other section will be paying a premium for instant bookings which will make up for the short-term availability of the property.

3. Balance Human Resource/Hospitality:

The average ratings of the business were down by **3.7%** when instant bookings were available.

Since instant bookings lead to more foot-fall at the property, this could be the reason behind the lower ratings as more foot-fall would mean more customers to attend to, and the more customers the business will have, the more staff should be there to attend to the customers. Lack of staff and commotion caused at the property due heavy foot-fall could cause discomfort/unsatisfaction to the customers.

To solve this problem, increasing the number of staff could improve customer satisfaction.

Note: Routine maintenance/cleanliness should be the top priority of the business since it directly effects the experience of the stay.
